Ionization

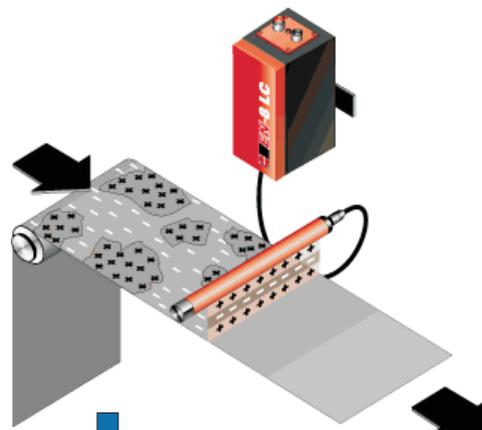

... eg. DIRECTLY AT THE PATERNOSTER

Applicability:

The ionization removes the static from the foil, avoiding any adhesion of dust. This is enhanced by also using the air gun/ring ionizer for panel cleaning.

Advantages:

Through using the ionization, dust is avoided by the cleaning of the parts and foil - before the press process.

IT MAKES 3D-THERMOFORMING EASY.

YOUR PARTNER

Construction:

The ionization at the press is possible in three versions:

version 1) Foils- ionizing-bar at the press-
consisting of:

- 1 pc ionizing-bar length 1500 mm (incl. fixing angle)
- 1 pc high voltages transformer (with function control)
- 1 pc high voltages cable - 1 metres

version 2) Hand blower - ring-ionizer -
consisting of :

- 1 pc ring-ionizer
- 1 pc high voltages transformer (with function control)
- 1 pc voltages cable - 5 metres

version 3) Complete version -
consisting of:

- 1 pc ionizing-bar
- 1 pc ring-ionizer
- 1 pc high voltages transformer (with function control)
- 2 pc voltages cable - 6 metres
